

WHAT IS C-BOND NanoShield™?

C-Bond NanoShield™ is a patent protected, multi-purpose glass strengthener and water repellent solution designed to significantly decrease windshield damage from chipping and cracking. NanoShield™ is also designed to improve driver visibility and reaction time in wet weather conditions.

Untreated

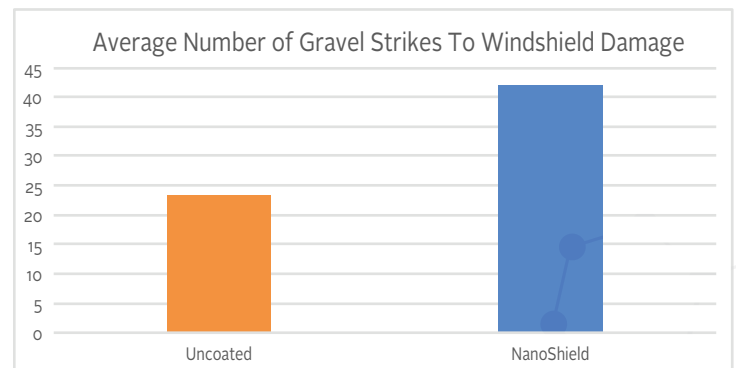

C-Bond NanoShield™

HOW DOES IT WORK?

C-Bond is a "smart solution" engineered to enable glass material to dissipate energy by permeating the glass surface and identifying inherent microscopic flaws and defects that are a natural part of every glass surface and weaken the glass composite structure, initiating failure. C-Bond's proprietary technology covalently bonds to and repairs the identified surface imperfections, dramatically increasing the mechanical performance properties of the glass unit while maintaining original glass design integrity.

BENEFITS AND FEATURES

- Decreases Windshield Damage from Chips and Cracks up to 80%
- Improves Windshield Visibility
- Improves Driver Reaction Time

80% Improvement in Chip and Crack Resistance

EASY TO APPLY

UNRIVALED Windshield Safety and Performance
